WHEN AMERICA IS GROWN

By FREDERIC J. HASKIN.

A Washington economist has shown that the entire wealth of the ancient valuation on the Washington real estate cial difficulties and the consequent market. Not even the "swollen fortunes" of our Rockefellers and Carnegies can be taken as a measure of the wealth of the American people. It has been shown that the American farmer earns enough in seventeen days to wipe out Standard Oil; in seven weeks he makes enough to buy out the steel trust. The farmers who work under the Stars and Stripes have a growing pains? daily income of \$24,000,000.

The United States has suffered many great misfortunes. The civil war was more costly in blood and treasure than any conflict of modern history, but in the decade between 1869 and 1870 the wealth of the country was increased by 87 per cent. Since that time there have been great panics and commercial depressions. Yet the growth has continued steadily without a break, and if the ratio of increase of wealth that has obtained ince 1860 be maintained until the year 2000, the American people will possess wealth ten times greater than the whole

world can now claim. The pessimist who may interpose the objection that the increasing population will prevent the indicated accretion is already confounded and routed by the testimony of history. It has been proved in every nation in Christendom that and they are typically American. That the acknowledged hurt of the growing pains caused by the present depression is reason for doubting a continuation of growth is scouted by the figures, which show that the civil war, the panic of 1833, and all other disassions that the plazza as a breakfast room.

This encouraged her so that this summer she intends to have one of the big straw rugs for the plazza floor, and a small stand to hold the fancy work bags and other things that ordinarily collect on a living room table.

The cold the breeze that blows over the face, they are quite comfortable so long as small stand to hold the fancy work bags and other things that ordinarily collect on a living room table.

Using the plazza as a breakfast room made in the breeze that blows over the face, they are quite comfortable so long as they keep the bedding close about the neck.

If one happens to have a tiny upstairs balcony, as many of the newer houses do, learning to sleep in a hard. ters have been powerless to stop the

in use by the educated few, this daily

will have when it reaches the 385,000,000 mark. France has 190 to the square mile, as against the prediction of 128 in the United States in 2000, and its per capita wealth is \$1,228. The same showing is made by the several States in the Union. New York's per capita is \$1,857, or more than \$500 more than the general average for the country. In the thinly populated Western States, whose natural resources are much greater than New York's, the wealth per capita is in some instances only one-fifth as great.

As the population of the country in-creases toward the mark set for ninety years hence, the utilization of resources and the additional demand created for cts of field and mine will be such that the increase in wealth cannot fail to keep pace. And keeping pace with the enormous growth of population means only one-twentieth as rapid creation of wealth as shown by the record since 1900, since McKinley was elected the second time, since what seems only yesterday.

The farmer and the miner could not have done what they have in this country if it had not been for the application of business genius to their products. Without the railroads, the coal mines of the interior would be useless. Without swift express trains, the rich fruit and vege-table gradens of the South could not sell their products. Without the ice machine, the great meat industry could not rive, and the cattle grower could not market his herds. Without the organization of great buying and selling concerns, the markets of the modern age could not exis: over night.

In the ninety years to come, there is no doubt but that the abuses of personal and equal rights on the part of the great and equal rights on the part of the great business organizations will be prevented and corrected. The evils of the corpora-tion will be extinguished in the benefits of co-operation. The organizations will not be abolished; they will be extended to include practically the whole people. It will not require ninety years for the example of the truck growers of Eastern Virginia, the beet growers of Iowa, the fruit growers of Southern California to demonstrate to all farmers the value of intelligent co-operation. The deeds of violence of the Kentucky night of violence of the Kentucky night riders will be forgotten, but such organizations as the Tobacco Growers' Protective Association will continue to exist. The farmers of the country will get their weather predictions and their market quotations by telephone, or, perhaps, by wireless ticker, every morning. They will market their produce at the point of consumption by the instantaneous agency of

The United States to-day is the wealth- But that a more sensible and economic lest country on earth. If the American distribution is possible cannot be doubted people are one-fifth as industrious and by those who have faith in the human thrifty in the coming ninety years as they have been in the past nine decades they will have gathered in this country as much wealth as is now possessed by the whole world. The natural resources of the International Property of the International Property of the International Property of the Normal Rational Property of the International Property of the Normal Rational Property of the United States, its farms and forests mands of business. Witness the cur-and its mines, have by no means reached lency panie of last October and the the acme of their development. All emergency currency legislation in Con-wealth must come from the bosom of gress. Yet if there were no increase per the earth, created by the farmer's plow, in the year 2000, if conducted on lines the miner's pick, and the artisan's constructive skill. Once brought into existence, that wealth may be multiplied, as world. The requirements would be for to-day. The tendency of the time argues, Americans have multiplied it, by the application of business and scientific in- is now in existence. On the basis of the greater and much more equitably dispresent per capita the stock of money in the country in 2000 would be twelve

billion dollars. It is apparent that some readjustment republic of Athens was not enough to will be required before that day comes, buy the New Willard Hotel at its present May it not be true that the recent finandustrial depressions were results of the need for enough of that readjustment to fit the conditions of growth which are so rapidly going forward to the goal pre-dicted for ninety years hence? That goal will be reached in twenty-five years if the ratio of wealth of the past ten years increase is kept up. Doesn't it seem

> The growth of the business of the American farmer, the great majority of the individual farmers still clinging to Grown-Agriculture.

methods of the past, has been such that FROM WOMAN'S the annual moving of the crops is sufficient to shake our financial institutions to their foundation stones even in good years. The crops are being increased. More is being raised on one acre, and there are more acres each year than there were the year before. If the financial system and the currency supply remain stationary for ten years, the crops

But the financial system will not remain stationary. The wealth of the counclothes is required.

As a readjustment of financial condi-tions and business organizations is inevitable some time within the next ninety years, it is to be doubted if there will be tributed. Although there will be the very have a trick of running down and pulling

do" class.

Rich enough now to buy out the United Kingdom, France, and Italy, the United States will outstrip all the nations in the work of creating and conserving wealth during the rest of this century. The Americans have the advantage of natural resources, of plenty of room, and of the national trait of contempt for precedent when occasion demands the invention of the property. to you that our troubles are merely when occasion demands the invention of property. omething new

percolators or urns all winter are get- tom by some sort of little cravat which cause the neck to become thin and their own.

develops gradually between the ages of fifteen and thirty, unless subjected to a constant and involuntary course of slow strangulation, such as Nero and other torture specialists would never have dreamed of inflicting. An extremely high collar decreases the apparent height of the entire figure, as well as the length of the neck, which, to be artistically proportioned, should measure at least five inches from the collarbones to the ears and be very slightly rounded. Of the two evils, the neck would infinitely be better thin than fat. A thick one is intolerable, in that it immeasure ably coarsens the appearance and is impossible to dress becomingly. Moreover, there is always the possibility that a thin neck will increase in circumference, whereas one that is too round must be quite as sharply watched and measured as is a rejuctant waist.

Its possessors should give up storely

The bodice band should be worn loosely at all times, and, whenever possible, collars should be dispensed with. Because necks are popularly supposed to be elastic, one that is slim but short may be gradually lengthened by the practise of turning it as far as possible from side to side, and by stretching it upward on pretense of counting skyupward on pretense of counting skyscraper stories. It is said in extenuation
of the "rubbering" habit that to look
at objects from afar off improves the
sight. Certainly, by fixing the gaze upon
scraper stories, a tiny oasis.
